

-axis variable ligallons of gastiand the y-axis variable ligallons of gastiand the y-axis variable linumber of miles drivential you drove 100 miles on 4 gallons of fuel, you would place a point at (4, 100). After several points have been plotted, it is likely that this example graph would end up having a general positive slope, as more gallons of gasoline usually mean more distance to travel. This is called a positive relationship or correlation. A positive slope shows an upward trend as one reads from left to right. A negative slope, on the other hand, would be revealed by the increase in one variable being associated with a decrease in another. This would appear on the graph as a downward trend from left to right.

Data can be recorded and graphed with the same software program, such as Microsoft Excel. It is important that students learn to label their x-land y-axes and examine the scales that the computer often chooses as a default.

BrainPOP Jr.qs video and related lessons and activities for graphing are one of the always-free subject lessons the site offers, regardless of your schoolqs subscription status. The Brainpop Jr. content aligns with Math K.11, 1.12, 2.15, 3.15, and 4.14.
